

Exciting things are happening!

## The New Blokart Tyre

The first shipment of the purpose built Blokart tyre has arrived and WE ARE ACCEPTING ORDERS NOW!

Features:

When used at rated pressures this purpose built tyre will deliver higher speeds and has major benefits for asphalt, Beach and Desert sailing with:

- Significantly Stronger Casing (motorcycle technology), making it more stable at speed and when cornering than the old wheelbarrow tyres
- Tubeless (optional) for quicker tyre changes and the use of puncture sealant.
- Well Balanced, typically no need to balance the new tyres when running them tubeless.
- Thicker Tread Wear Area, significantly improves longevity and puncture resistance.
- Better wearing, with Blokart's exclusive Durable Compound.
- Raised Centre Ridge, allow for minimal rolling resistance
- Safer, better control enabling higher speeds and cornering ability lessening tyre-roll, chord failure etc.
- Use with recommended sealant (see below) for automatic puncture repair of holes up to 2mm diameter with minimal loss of pressure. Note: Plug Kits are available for larger holes.

**BWH0006 RRP**

## Tubeless Valve Stems

Tubeless Valve Stems are available, and necessary for all wheels that you are fitting these tyres to, so get a couple of spares!

- Short valve length to prevent damage from 'rubbing wheels'.
- Valve Pullers are available to properly seat the valve stem in Rims

**SWH0009 RRP**

## Tubeless Valve Pullers

Tubeless Valve Stem Pullers are a necessary tool for fitting the valve stems to rims.

If you haven't already got one, we have them in stock.

The Thread Tap and Valve remover on the Valve Pullers are also very useful.

**XAC0028 RRP**

## Tubeless Tyre Sealant

Not essential, but for additional puncture protection a liquid sealant will be available.

Finish Line sealant features incredible protection against puncturing from objects upto 2mm diameter! It also seals the tyre bead and valve stem for extra protection.

In testing, tyres we pumped to maximum pressure and then stabbed repeatedly (6 times) with 75mm x 2.5mm nails, which resulted in only 5psi pressure loss.

**XCA0029 RRP** (240ml bottle does 3 Blokart tyres at 80ml per tyre)

## Tubeless Repair Kit

Blokart Repair kits in a convenient sealed aluminium container are in stock.

These kits enable sailors to plug obvious punctures quickly...often without removing the wheel or tyre!

- Sealed Aluminium container
- Stabber built into case top
- 5 Small & 5 Large Plugs supplied

**XAC0027 RRP \$ea**

## Tubeless Tyre Fitting Tips:

*The use of a compressor is necessary when fitting new tyres as the fast volume of air blows the bead of the tyre onto the rim. After some use the tyre beads widen and naturally seat themselves allowing a hand pump to be used.*

*If still having trouble seating the bead, we recommend using a length of cord (even your belt) to 'tourniquet' the circumference of the tyre, which naturally spreads the tyre beads and seats them onto the rim.*

*The new tyres are compressed a little for transport so we recommend 'widening' new tyres by hand when you receive them by pulling the beads apart and letting them sit for a while before fitting.*

## Dark Grey Rims

Blokarts have undergone a cosmetic upgrade with great looking Dark Grey Rims!

Karts are being built with Dark Grey Rims (front & rear)

Light great Rims will be available for some time, so customers wanting one rim can match their colour, but they will be phased out as the stock depletes.

Note: Rim specifications (30psi Max) have not changed. Just the colour.
